

KEYMAY

TRENCH SHORING SYSTEMS

Gravity Locks engage locking the panels to struts before any worker enters the area to insert pins.

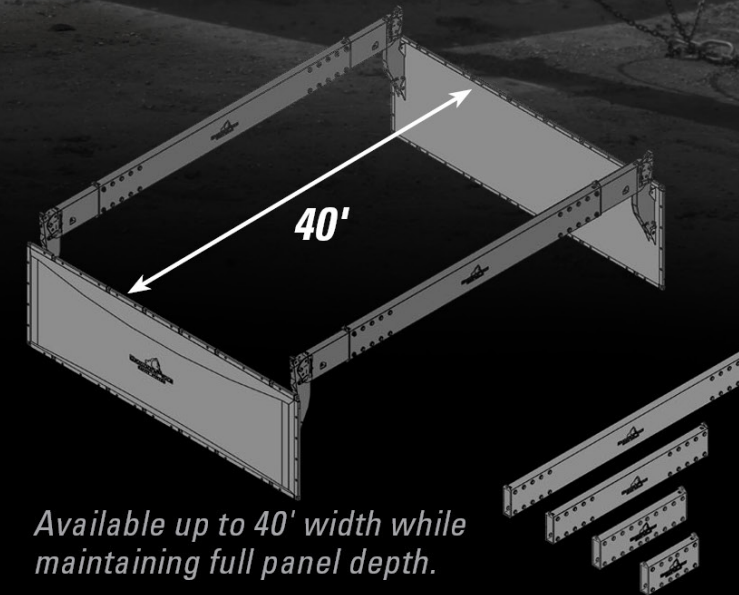

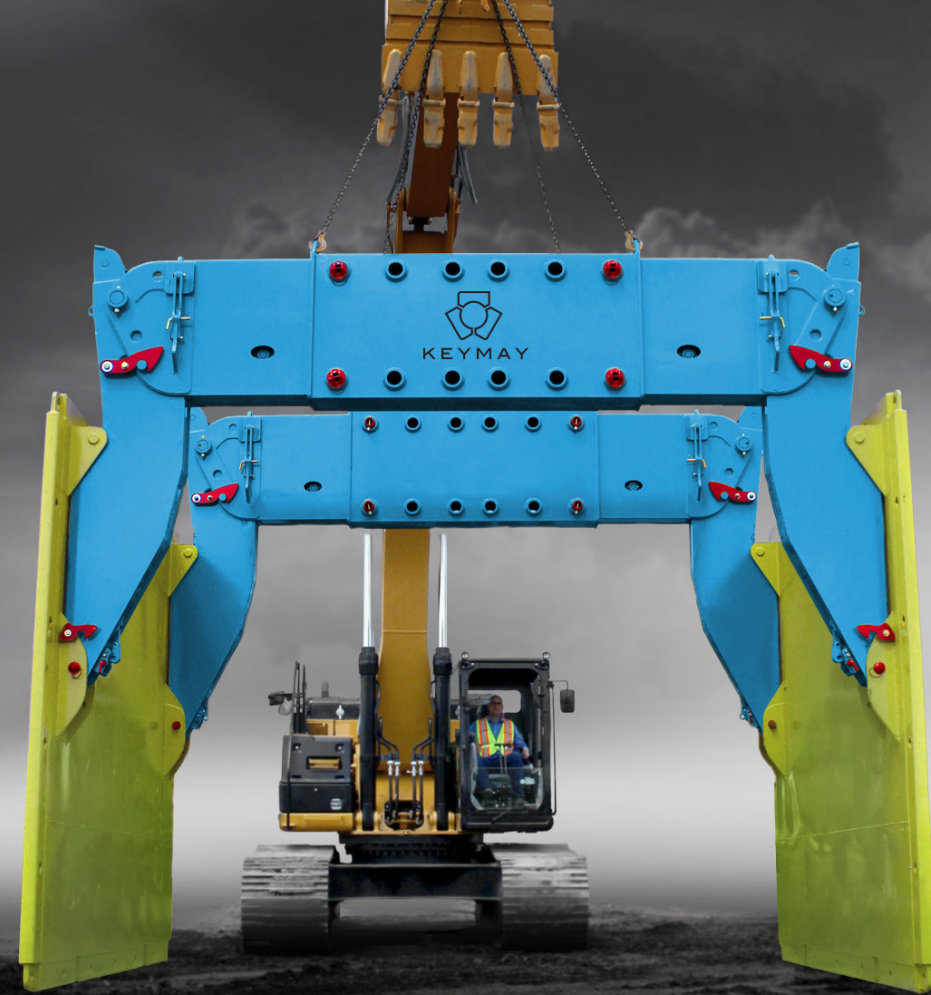

NOTHING FASTER

A SIMPLE TO USE SYSTEM THAT INCREASES PRODUCTIVITY

SAFER TO ASSEMBLE

DESIGNED TO ALWAYS KEEP WORKERS OUT OF THE LINE OF FIRE

THE ADJUSTABLE, SELF DESCENDING
HIGH ARCH
THE ONLY SAFE SOLUTION

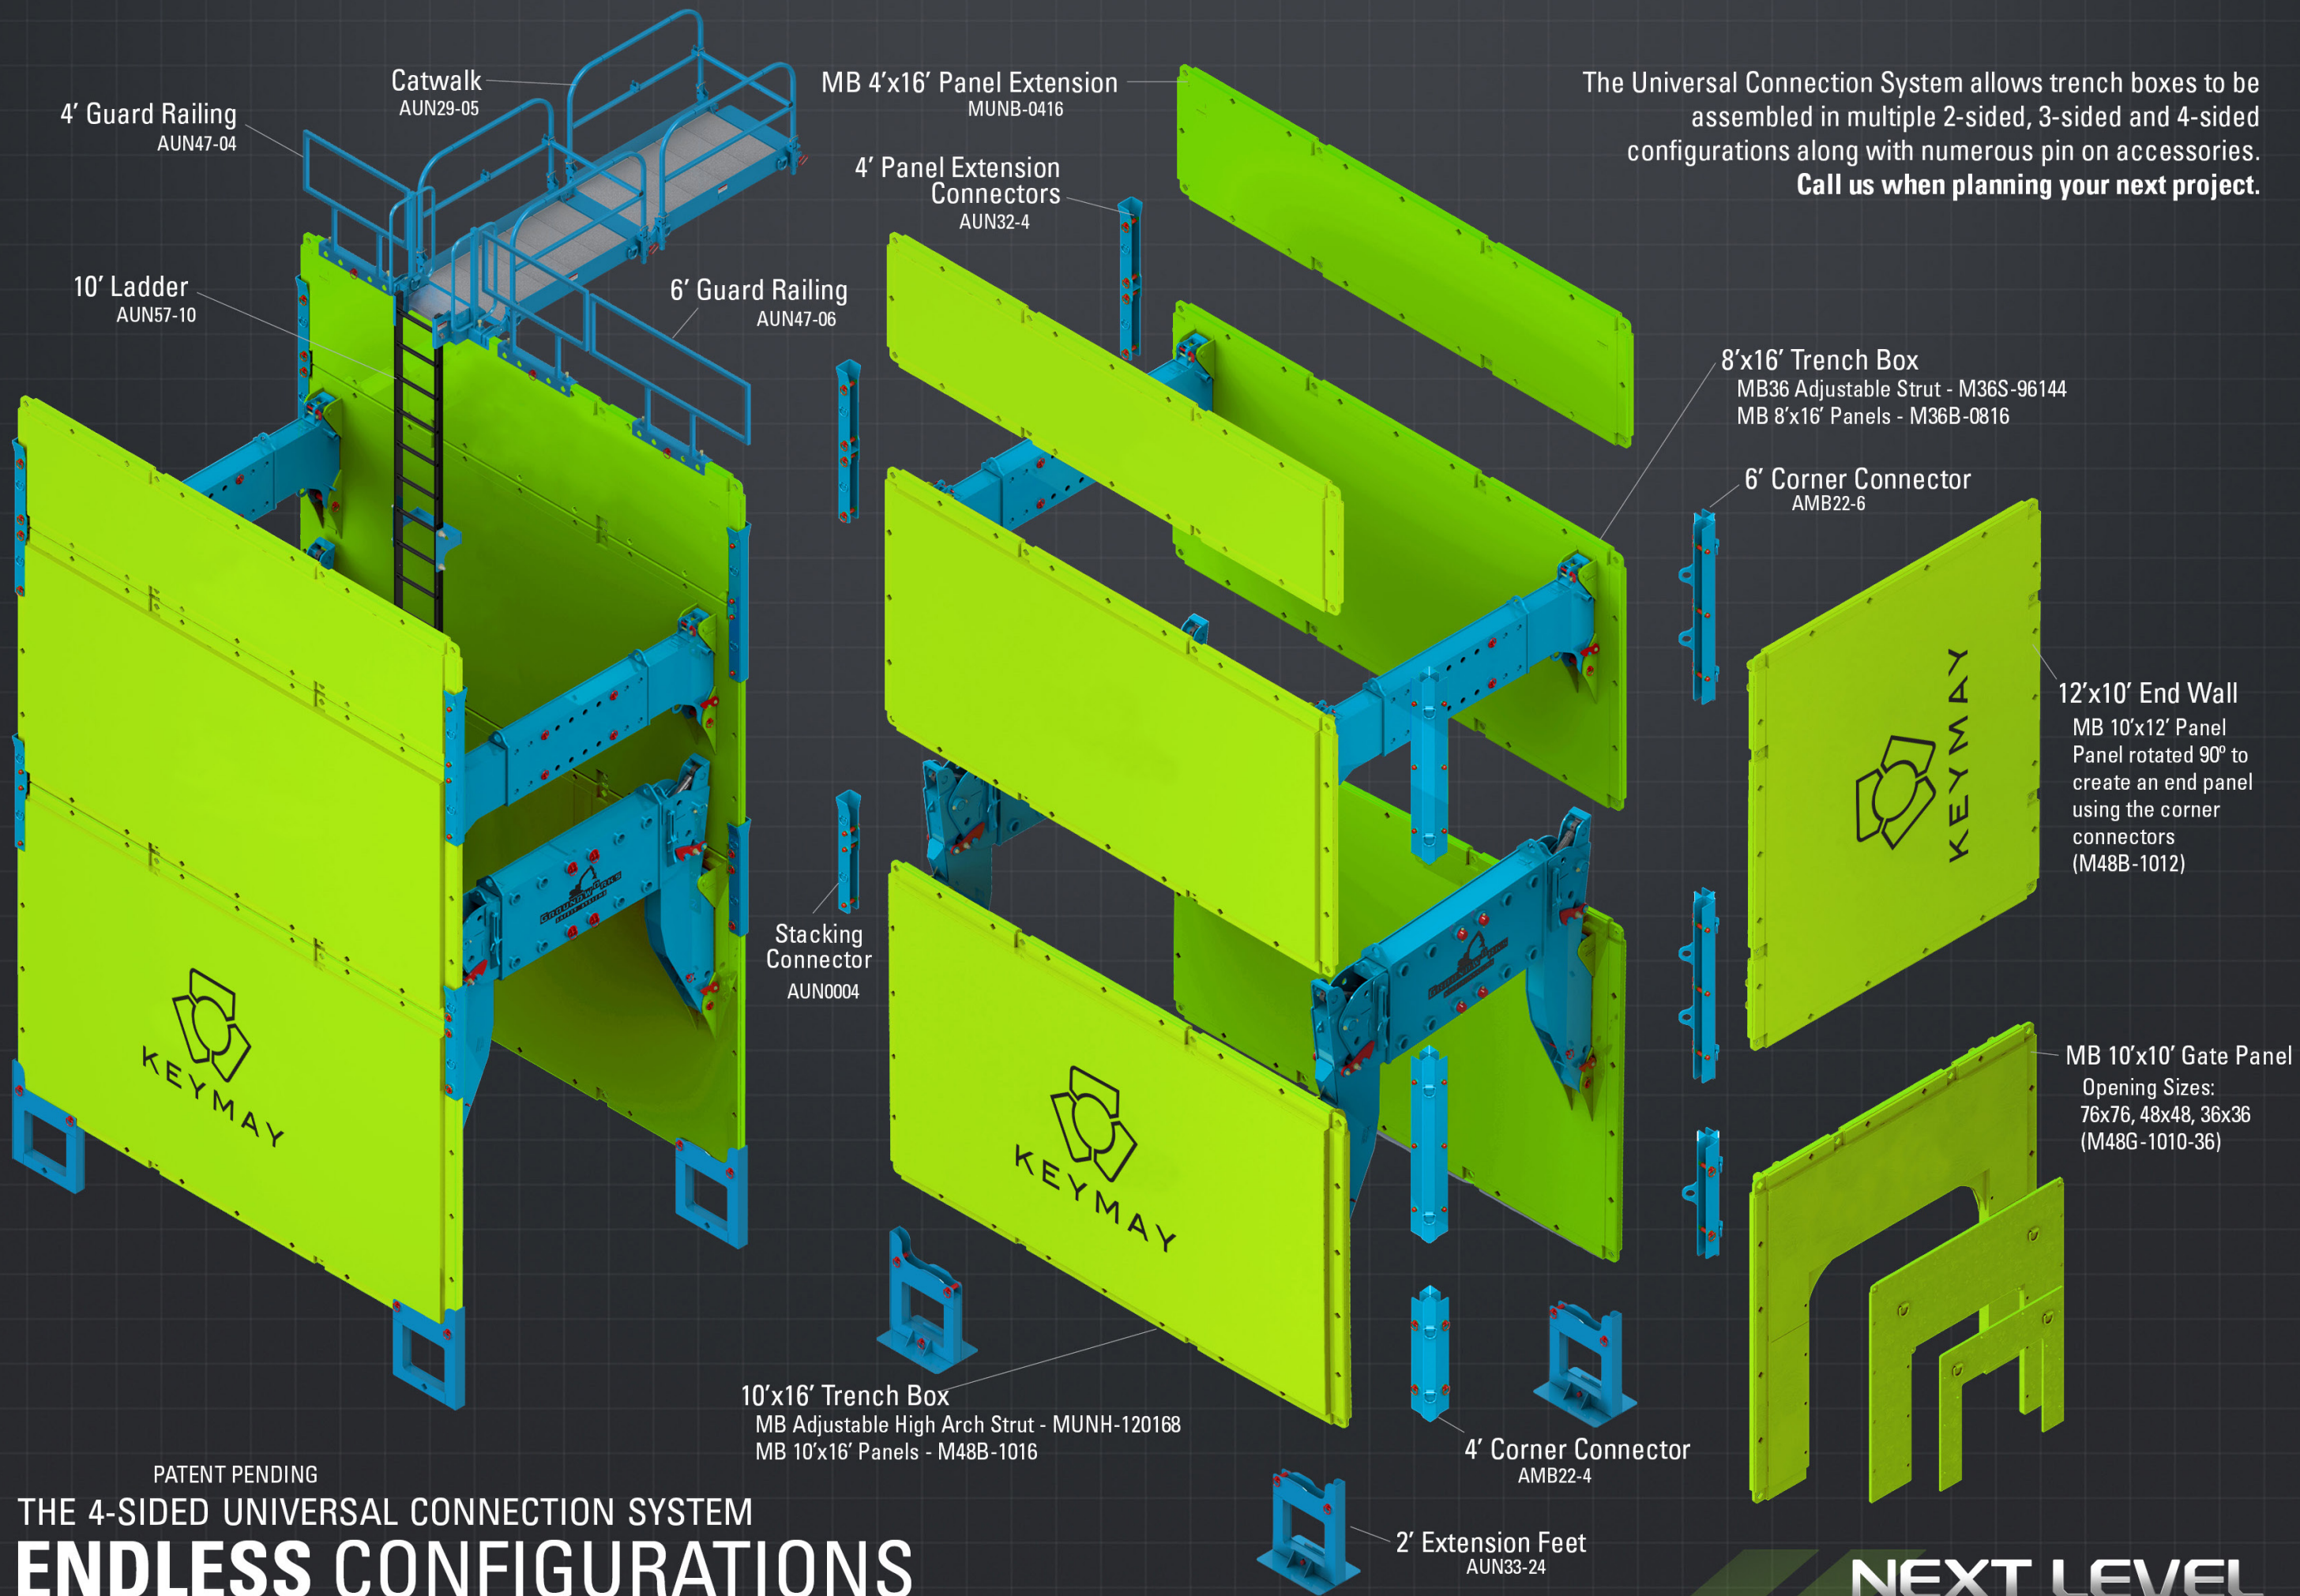

Available up to 40' width while maintaining full panel depth.

2016 RER Innovative Product Awards Winner

We have taken one of the most difficult and dangerous products in the trench safety industry and made it our simplest and safest to use.

In a few minutes the GroundWorks High Arch can be adjusted to width and then lifted into a locked position with no one ever in the line of fire. The safety cannot be matched and the time and money savings is unprecedented. To disassemble unlock the latch at eye level and a machine lifts the one side of the system allowing it to safely float back to the ground in 1 minute, and ready to be loaded.

The Universal Connection System allows trench boxes to be assembled in multiple 2-sided, 3-sided and 4-sided configurations along with numerous pin on accessories.
